JUTHUR PROJECT · ROOTS OF SENSATION (AMER,
2024)

"A letter is known through the crossing of the senses, and language through the multiplicity of context."

Completing the Letters & Blending

Foundation Level · Second Phonics Tier · Ages 5–6

Eight letters complete the alphabet, then the first word is born — j · ḥ · s · sh · ʿ · gh · f · q

By Dr. Adel F. Amer · Master Volume 2 — Completing the Letters & Blending (Juthur)

COMPLETING THE LETTERS & BLENDING

The child has lived the long vowels and the first consonants in his body; now he completes the alphabet with deeper sounds: from the cold whistle of "s" to the deep beat of "q," and from the warm breath of "ḥ" to the rustle of "gh." Then comes the great moment: his finger walks across two letters and blends them, and the first word he reads by himself is born.

Letters: j ḥ s sh ʿ gh f q · Blending: the letter walks · The word stands.

GUIDE FOR THE FACILITATOR & PARENT

This level's letters are guttural and deep (h, ʿ, gh, q). Accompany the child gently, with no pressure on the throat. The golden rule: let him feel first, then describe; and do not prolong repetition of the deep sounds.

"The question's silence" is 2–3 seconds at most — a long silence unsettles the young child. Each letter has an intermediate action that carries the sound into performance.

Psychomotor-affective in derivation: Simpson (psychomotor), Krathwohl (affective), Ehri (pre-alphabetic), Ayres, and Versteegh. It claims neither CEFR nor Bloom — we are in the "pre-symbolic-communication" stage.

The English line is for parents who do not speak Arabic (Arabic as a heritage language), to guide the demonstrative action — it is not a text for the child.

STATION (MAHATTAT) 1 · THE ADVANCED LETTERS · "J" — THE VIBRATION (AMER, 2024)

"j" — the sound that vibrates.

The child gently places his palm on his throat and releases "j." He feels a warm vibration under his palm, like the vibration when he laughs.

Question's silence, 2–3 seconds · Put your palm on your throat... do you feel the vibration with "j"?

Mirsah (Amer, 2024): the child rests his palm calmly on his throat (no pressure) and releases "j," observing the vibration. "Rest your palm gently... and track the vibration."

j... j... who vibrates? ja... I vibrate. · A palm on the throat with every "j."

A word you can sense: jamal (camel) · Draw "j" and its dot in the sand, and remember the vibration.

Point of articulation: the middle of the tongue rises to the middle of the palate, with voicing (voiced).

Intermediate action: put your hand on your throat while you laugh and feel the vibration. · Discovering meaning: what thing vibrates warmly like your throat? · Alternatives: too subtle — a very light touch to the throat; over-active — vibration with a gentle shoulder shake. · For non-Arabic parents: Put your hand on your throat while you laugh; feel it buzz: j.

STATION 2 · THE ADVANCED LETTERS · "Ḥ" — THE WARMTH

"ḥ" — the warm breath.

The child exhales warmly onto his palm and releases "ḥ...". A warm breath issues from deep in the throat without vibration, warming the palm.

Question's silence, 2–3 seconds · Exhale onto your palm... do you feel the warmth with "ḥ"? (warmth, no vibration)

Mirsah: the child exhales a long warm breath onto his palm with "ḥ," feeling warmth rather than vibration. "Exhale onto your palm... feel the warmth."

ḥ... ḥ... who warms? ḥa... I warm. · A warm breath on the palm with every "ḥ."

A word you can sense: ḥiṣān (horse) · Draw "ḥ" in the sand, and remember the warmth of the breath.

Point of articulation: the throat muscles (pharynx) narrow so a warm breath passes without voicing.

Intermediate action: exhale onto a mirror or cold glass; draw on the fog with your finger. · Discovering meaning: what thing gives off a warm breath like your mouth? · Alternatives: too subtle — a light short exhale; over-active — an exhale with slow stretching of the arms. · For non-Arabic parents: Breathe warm air onto your palm, like fogging a mirror: h (haa).

STATION 3 · THE ADVANCED LETTERS · "S" — THE WHISTLE

"s" — the cold whistle.

The child makes a small gap between his teeth and passes air: "s...". Cold air slips through the narrow gap between the teeth.

Question's silence, 2–3 seconds · Pass the air between your teeth... do you feel its coldness with "s"?

Mirsah: the child brings his teeth close, leaving a small gap, and passes the air of "s," feeling its coldness on his lips. "Let the air pass cold through the narrow gap."

s... s... who whistles? sa... I whistle. · Cold air between the teeth with every "s."

A word you can sense: samak (fish) · Draw "s" with its three teeth in the sand, and remember the whistle.

Point of articulation: the tongue tip near the roots of the teeth, and the air passes through a narrow gap.

Intermediate action: whistle like a bird; feel the coldness of the air on your lips. ·
Discovering meaning: what thing whistles cold like the air between your teeth? ·
Alternatives: too subtle — a light short whistle; over-active — a whistle with the
hand moving like the wind. · For non-Arabic parents: Hiss thin air between your
teeth, cold like a breeze: s.

STATION 4 · THE ADVANCED LETTERS · "SH" — THE SPREADING

"sh" — the long wind.

The child passes a long, wide breath: "sh...". The air stretches from his mouth long
and wide without stopping.

Question's silence, 2–3 seconds · Pass the air a long time... how does "sh" differ
from "s"? (wider and longer)

Mirsah: the child raises the middle of his tongue slightly and passes a wide, long
breath of "sh" that does not stop. "Let the air lengthen and widen... without
stopping."

sh... sh... who lengthens? sha... I lengthen. · Wide, long air with every "sh."

A word you can sense: shams (sun) · Draw "sh" with its three dots in the sand, and
remember the spreading.

Point of articulation: the middle of the tongue approaches the palate broadly, and
the air passes wide (broader than "s").

Intermediate action: blow on a feather or a hanging sheet of paper; watch it dance a long time. · Discovering meaning: what thing stretches long like your air? · Alternatives: too subtle — a light short air; over-active — air with a waving of the hands. · For non-Arabic parents: Blow long, wide air at a hanging feather and watch it dance: sh.

PLAY STATION (MAHATTAT MARAH) · A BREAK OF JOY · HUNTING THE DEEP SOUNDS

The children stand in a circle. The facilitator releases a deep sound: "c," "q," or "kh." Whoever places his hand on the correct place first (the throat? the chest? the lip?) wins a star! Sounds come from different places, and the body points them out.

STATION 5 · THE ADVANCED LETTERS · "c" — THE DEPTH

"c" — the deep sound.

The child places his palm on the upper part of his chest and releases "c" from deep in his throat. A voiced sound comes from deep in the throat, calm and requiring patience.

Question's silence, 2–3 seconds · Say "c" from deep in your throat... do you feel the vibration under your palm?

Mirsah: the child places his palm on his upper chest (with no pressure on the throat) and releases "c" from deep in his throat, feeling the vibration under his palm. "Release "c" from deep in your throat... and track the vibration."

‘... ‘... who goes deep? ‘a... I go deep. · A palm on the upper chest with every “‘.”

A word you can sense: ‘uṣfūr (sparrow) · Draw the rounded “‘” in the sand, and remember the depth.

Point of articulation: the throat muscles (pharynx) narrow with voicing (voiced and deep).

Intermediate action: put your hand on your chest as you yawn; feel the depth. ·

Discovering meaning: what deep thing comes from far away like your voice? ·

Alternatives: too subtle — a deep light breath without strain; over-active — depth with a calm cross-legged sitting. · For non-Arabic parents: Put your hand on your upper chest and breathe deep, no throat pressure: ‘a (ayn).

STATION 6 · THE ADVANCED LETTERS · "GH" — THE GARGLE

"gh" — the deep rustle.

The child places his palm calmly on his throat and releases "gh...". A deep rustle at the back of the throat, vibrating with the air.

Question's silence, 2–3 seconds · Say "gh" with a rustle... how does it differ from "‘"? (a rustle, not clarity)

Mirsah: the child places his palm calmly on his throat and releases "gh" as a deep rustle (no pressure), like gargling without water. "Track a deep rustle... without pressure."

gh... gh... who gargles? gha... I gargle. · A palm on the throat with the rustle of every "gh."

A word you can sense: ghazāl (gazelle) · Draw "gh" and its dot in the sand, and remember the rustle.

Point of articulation: the back of the tongue approaches the far palate (the uvula), and the air gargles with voicing (voiced).

Intermediate action: gently push air from deep in your throat, like gargling without water; hear the rustle. · Discovering meaning: what thing purrs and gargles like your throat? · Alternatives: too subtle — a light short rustle; over-active — a rustle with a gentle head shake. · For non-Arabic parents: Gently make a deep rustle in your throat, like a soft gargle without water: gh.

STATION 7 · THE ADVANCED LETTERS · "F" — THE PUFF

"f" — the light puff.

The child places the edges of his upper teeth on his lower lip and puffs: "f...". A light air passes between the lip and the tooth.

Question's silence, 2–3 seconds · Puff "f" onto your palm... where does the air pass? (between the lip and the tooth)

Mirsah: the child places the edges of his upper teeth on his lower lip and puffs "f" as a light puff on his palm. "Puff gently... feel the air pass."

f... f... who puffs? fa... I puff. · A tooth on the lip and a puff with every "f."

A word you can sense: farāsha (butterfly) · Draw "f" and its dot in the sand, and remember the puff.

Point of articulation: the edges of the upper teeth touch the lower lip, and the air passes as a puff (voiceless).

Intermediate action: blow on a candle (or imagine one) and put it out; feel the air between your tooth and lip. · Discovering meaning: what thing is put out by a puff like yours? · Alternatives: too subtle — a very light puff; over-active — a puff with putting out imagined candles. · For non-Arabic parents: Blow gently between your lower lip and teeth, like blowing out a candle: f.

STATION 8 · THE ADVANCED LETTERS · "Q" — THE KNOCK

"q" — the deep beat.

The child places his palm on his chest and releases "q!" from the deepest part of his mouth. A strong beat comes from the back of the mouth, and the chest vibrates with it.

Question's silence, 2–3 seconds · Say "q"... where does the beat come from? (from the back of the mouth, deeper than "k")

Mirsah: the child places his palm on his chest and prepares, then releases "q!" as a single beat from the deepest part of his mouth. "Get ready for a deep beat... from the back of your mouth."

q... q... who knocks? qa... I knock. · A single beat from the back of the mouth with every "q."

A word you can sense: qamar (moon) · Draw "q" and its two dots in the sand, and remember the beat.

Point of articulation: the back of the tongue rises to the far palate (the uvula) and detaches as a beat (deeper than "k").

Intermediate action: knock on a cushion a single deep knock; hear the beat. ·
Discovering meaning: what thing knocks deep like your voice? · Alternatives: too subtle — a muffled beat with the palm; over-active — two deep beats then stillness. ·
For non-Arabic parents: Knock a deep beat from the back of your mouth, like a big drum: q.

BLENDING · THE LETTER WALKS

"The letter walks."

I am not a symbol on a page, but a path under your finger. Your finger walks from right to left, and your voice walks with it: "b" then "aa" ... and they meet: "baa."
This is the first step in the journey of reading.

b + aa = baa! My finger walks, and my voice blends. · A finger walks over two raised letters (a raised outline on a mounted cloth) from right to left.

Mirsah: a raised, tactile letter on a mounted cloth strip. The finger walks along it and the sound stretches with the walking. · Intermediate action: draw two large letters with glue and sand; walk your finger over them and blend the two sounds. ·
Discovering meaning: which two sounds do you like to pair together? · For non-Arabic parents: Let the child's finger walk two raised letters right-to-left, blending the sounds into one: b + aa = baa.

BLENDING · THE WORD STANDS

"The first word stands."

baa... and baa... stand together side by side, and a word your heart knows is born: "baba" (daddy)! Not sounds that fly away, but a word with meaning that you read by yourself for the first time. This is your great moment.

baa + baa = baba! I read my first word! · The child builds the word with adjacent cards, then reads it whole.

Mirsah: two "baa" cards stand adjacent on a string or table; the finger walks and reads the whole word. · Intermediate action: make cards for syllables the child knows (ma, ba, nu), and let him assemble words: mama, tata, nunu. · Discovering meaning: what is the first word you would like to read by yourself? · For non-Arabic parents: Two known syllables stand side by side and the child reads a first whole word: baa + baa = baaba (daddy). Celebrate it!

PLAY STATION · CELEBRATING THE FIRST WORD ·
BUILDING WORDS

Each child holds two sound cards (such as "baa" and "baa"), they stand adjacent, their fingers walk, and they read together: "baba!" Whoever builds a word he knows raises it high and cheers with it! The first word is born from their fingers.

THE OBSERVATION & PASSAGE CARD (BAWSALA)

The facilitator records it (not the child). The passage criterion: embodiment, not mastery — that the child embodies most of the sounds, blends two sounds, and reads his first word.

He embodies the sound "j" with its motion and responds to it sensorially.

He embodies the sound "ḥ" with its motion and responds to it sensorially.

He embodies the sound "s" with its motion and responds to it sensorially.

He embodies the sound "sh" with its motion and responds to it sensorially.

He embodies the sound "c" with its motion and responds to it sensorially.

He embodies the sound "gh" with its motion and responds to it sensorially.

He embodies the sound "f" with its motion and responds to it sensorially.

He embodies the sound "q" with its motion and responds to it sensorially.

He distinguishes the deep sounds by their locations (throat / chest / lip).

Blending: his finger walks and blends two sounds into a syllable ("baa").

The first word: he reads a familiar word whole ("baba").

Sensory resistance: did he resist a sound or a motion? (to be documented)

After the child has completed the letters and generated his first word, he moves on to "From the Word to the Text" (Terracotta): the sentence breathes, then the picture speaks, then the workshop of sentences and the weaving of the text.
