From Word to Text

Lower Level · Third Sub-Volume · ages 6–7

Breath · Triadic Linking · Balance · Flow · Weaving

From a sentence that breathes to a text the child weaves by himself

By Dr. Adel F. Amer — ORCID: 0009-0008-9618-3863 · (Amer, 2024)

Third Sub-Volume · From Word to Text (Terracotta) · Conclusion of the Lower Level

INTRODUCTION — FROM WORD TO TEXT

The child has borne his first word, and now he completes the journey: he reads a sentence that breathes between its words, discovers that image, word, and movement are one and the same, builds one balanced sentence and another that flows, then weaves sentence to sentence until the first text he reads in full is born. Here the foundation is complete, and the child prepares to set sail with Sindbad.

The Sentence: it breathes · it speaks

The Workshop: balance · flow

The Text: weaving

FACILITATOR AND PARENT GUIDE

Deeper sounds: the letters of this level are guttural and deep (h, ‘, gh, q).

Accompany the child gently, without pressure on the throat. The golden rule: let him feel first, then describe, and do not prolong repetition of the deep sounds.

A flexible timer: the “question silence” is 2–3 seconds at most — a long silence unsettles the little one. Each letter has an intermediary action that carries the sound into utterance.

International alignment: a sensory-motor and affective level: Simpson (psychomotor), Krathwohl (affective), Ehri (pre-alphabetic), Ayres, and Versteegh. It does not claim CEFR or Bloom — we are in the “pre-symbolic communication” stage.

The English bridge: the English line is for non-Arabic-speaking parents (Arabic is his heritage), to guide the intermediary action — it is not a text for the child.

STATION 1 · THE BRIDGE OF COMPOSITION —
BREATH

I ☺ eat ☺ an apple

“Between words, a breath” — I · eat · an apple

Between every two words there is a small place where you take a breath.

“I” (breath) “eat” (breath) “an apple.” Without breath the sentence suffocates; with breath it comes alive and its meaning appears.

The Anchor (Mirsah, مِرْسَاة (Amer, 2024)): the child places his finger on each raised word and reads it, then pauses and takes a short breath at the little dip between the two words. “Read a word... take a breath... then the next word.”

Question silence 2–3 seconds: Read the sentence twice: once without pausing and once with a breath between the words... which is clearer?

♪ A word... a breath... a word... this is how my sentence breathes. A finger that stops and a short breath between every two words.

An example we read: I eat an apple — write your first sentence and place a small dot in place of each breath.

Facilitator’s glossary: The Rule: the sentence is a unit of meaning; short pauses between words aid comprehension and fluency. · Intermediary action: read a short sentence with your child, and take a breath together between every two words. · Discovering meaning: where do we like to take your breath when we read your sentence? · Alternatives: rattle: a sentence of two words only · movement clip: a small step with each word. — For non-Arabic parents: Read each word, take a short breath at the little face between words, then the next word.

STATION 2 · THE BRIDGE OF COMPOSITION — TRIADIC LINKING

“Image · word · movement” — picture ← cat ← acting out

When you see a picture of a cat you say “cat,” when you read the word “cat” you see the cat, and when you act out the cat you become the cat. Image, word, and movement are three faces of one single truth.

The Anchor (Mirsaḥ, مِرْسَاة (Amer, 2024)): the child links three cards: the picture of a thing, then its written word, then he acts it out with his body. “Look at the picture... read the word... act it out with your body.”

Question silence 2–3 seconds: Do the picture and the word point to the same thing? How did you know?

♪ I see it... I read it... I act it out... they are all one thing. A gesture to the picture, then to the word, then acting with the body.

An example we read: cat · sun · house — draw something, write its name beneath it, then act it out for your family.

Facilitator’s glossary: The Rule: linking the written symbol, the picture, and the movement anchors meaning (multiplicity of representations). · Intermediary action: show your child a picture, and let him read its name then act it out. ·

Discovering meaning: which word do we like to draw and act out together? ·

Alternatives: rattle: a picture and a word without movement acting · movement clip: full acting with the body. — For non-Arabic parents: See the picture, read its word, then act it out with your body — one meaning, three faces.

STATION 3 · THE SENTENCE WORKSHOP — BALANCE

“Balanced construction” — the bananas ⊥ delicious

Some sentences stand like a balance-scale: a thing in one pan, and its quality in the other pan. “The bananas... are delicious.” Feel it with your two hands and you will sense its balance before you know its name.

The Anchor (Mirsah, مِرْسَاة (Amer, 2024)): the child places a noun card in one palm and an adjective card in the other, balances between them like a scale, then reads the sentence. “Balance between your hands... a noun here, and a quality here.”

Question silence 2–3 seconds: When you place the noun and the quality together, does the sentence stand balanced? (Try before we name it.)

♪ A noun... and a quality... they balance... and my sentence stands. Two palms balancing two cards together with the reading.

An example we read: The bananas are delicious · The sun is shining — build your balanced sentence: a thing + its quality, and write it.

Facilitator’s glossary: The Rule: the nominal sentence: subject and predicate (he experiences its balance bodily before naming it). · Intermediary action: choose with your child a thing in the house, and build a sentence: “..... delicious / beautiful / big.” · Discovering meaning: which thing do we love, and which quality suits it in balance? · Alternatives: rattle: two large clear cards · movement clip: balancing with the arms outstretched. — For non-Arabic parents: Balance a noun card and an adjective card in your hands, then read the sentence: The banana is tasty.

FUN STATION · A PLAYFUL INTERLUDE — BUILDING SENTENCES

Each child holds a word card (a noun, a verb, or an adjective), and they stand in a row to make a sentence that stands balanced or runs flowing. Whenever the sentence stands correctly, everyone reads it together and claps! Their bodies become words, and their standing becomes a sentence.

STATION 4 · THE SENTENCE WORKSHOP — FLOW

“Flowing construction” — runs ← the boy ← rejoices

And some sentences run like water: a verb begins the movement, then who does it, then how. “Runs the boy rejoicing.” Feel it and you will sense its flow from the verb to its end.

The Anchor (Mirsah, مِرْسَاة (Amer, 2024)): the child arranges cards beginning with the verb, and moves his finger flowingly from their beginning to their end as he reads. “Begin with the verb... let the sentence run.”

Question silence 2–3 seconds: How does this flowing sentence differ from the balanced sentence? (Try both of them.)

♪ A verb... it runs... and my sentence runs with it. A finger flowing from the verb to the end of the sentence.

An example we read: Runs the boy rejoicing — build a sentence that begins with a verb, and write it.

Facilitator’s glossary: The Rule: the verbal sentence: verb and doer (he experiences its flow before naming it). · Intermediary action: begin a sentence with a verb: “jumps... eats... laughs...,” and complete it together. · Discovering meaning: which verb do we like to begin a running sentence with? · Alternatives: rattle: a sentence of two words · movement clip: acting out the verb with the body while reading. — For non-Arabic parents: Start with the verb and let the sentence flow to its end: The boy runs joyfully.

STATION 5 · THE WEAVING OF THE TEXT — WEAVING

My first weave — “sentences interlace” — sentence + sentence = a text

Just as the weaver weaves thread to thread until a garment is born, you weave sentence to sentence until a text is born. “I love the cat. The cat plays with me.”

Two sentences interlace and tell a story.

The Anchor (Mirsah, مِرْسَاة (Amer, 2024)): the child connects two sentence cards with a thread or his hands, and reads them consecutively so he discovers that together they tell a tale. “Connect the sentence to the sentence... and read them as one story.”

Question silence 2–3 seconds: When you place the two sentences together, have they become a story longer than each one alone?

♪ A sentence... and a sentence... they interlace... and my text is born. Connecting two sentence cards then reading them joined.

An example we read: I love the cat. The cat plays with me. — Weave your first text: write two sentences that tell together.

Facilitator’s glossary: The Rule: textual cohesion: linking sentences with a connected meaning generates a text (the first cohesion). · Intermediary action: weave a story from two sentences about your day, and read it together. ·

Discovering meaning: which small story do we like to weave from two sentences? ·

Alternatives: rattle: two very short sentences · movement clip: acting out the story after weaving it. — For non-Arabic parents: Weave sentence to sentence and a text is born: I love the cat. The cat plays with me.

OBSERVATION AND PASSAGE CARD

The facilitator records it (not the child). The criterion for the level's conclusion: that the child reads a complete sentence, constructs a sentence by himself, and weaves a short text — as embodiment and understanding, not mechanical mastery.

Indicator: Reads a sentence with pauses that breathe between its words (Breath)

Links the picture to the word to the movement (Triadic Linking)

Builds a balanced nominal sentence (Balance)

Builds a flowing verbal sentence (Flow)

Weaves two sentences into a short text (Weaving)

Comprehension: Explains the meaning of the sentence he read in his own words

Reads his first text (two sentences) connected with meaning

Sensory response: Did he dance with liveliness? (recorded)

The Lower Level is complete — and the Sea begins: The child who began with a finger touching the elongation now reads a text he weaves himself. We now hand over to the Intermediate Level “The Childhood of Sindbad,” where letters become roots and roots become stories. (See the closing page.)

CONCLUSION OF THE LOWER LEVEL — A JOURNEY COMPLETES, AND ANOTHER BEGINS

You began with a finger touching the elongation, then you lived the letters in your body, and you bore your first word, then you wove the first text with your hands. You no longer spell out — you have become a reader. And now, my little one, a ship, a sea, and stories await you: Sindbad extends his hand to you.

The next station: The Intermediate Level · “The Childhood of Sindbad” — where letters become roots, and roots become stories.

“From the finger, language began; and in the body, it sprouted as a living root.”
